where $\mathbf{H}$ is hierarchy matrix.

16 Proof Sketches

16.1 Proof of Consciousness Conservation

Consider isolated system with N agents. Total consciousness:

$$\Phi_{\mathrm{total}} = \sum_{i=1}^{N} \varphi_i \tag{131}$$

Taking derivative:

$$\frac{d\Phi_{\mathrm{total}}}{dt} = \sum_{i=1}^{N} \frac{d\varphi_i}{dt} \tag{132}$$

$$= \sum_{i=1}^{N} \sum_{j=0}^{5} \frac{dR_{ij}}{dt} \tag{133}$$

In isolated system, field drift satisfies:

$$\sum_i F_{\mathrm{drift}}^{(i)} = 0 \tag{134}$$

Therefore:

$$\frac{d\Phi_{\mathrm{total}}}{dt} = 0 \implies \Phi_{\mathrm{total}} = \mathrm{const} \tag{135}$$

16.2 Proof of Meta-Stability Convergence

Define distance $\Delta_n = \|\text{Meta-UOBV}_n - \text{Meta-UOBV}_{n-1}\|$.

Meta-operator satisfies contraction for large n:

$$\Delta_{n+1} \leq \kappa \Delta_n, \quad \kappa < 1 \tag{136}$$

Therefore:

$$\Delta_n \leq \kappa^n \Delta_0 \to 0 \text{ as } n \to \infty \tag{137}$$

By Cauchy criterion, $\{\text{Meta-UOBV}_n\}$ converges.

16.3 Proof of Coherence Bound

Upper bound:

$$E_{\text{coupling}} = \sum_{i<j} \Omega_{ij} R_i R_j \tag{138}$$

$$\leq \max_{i \neq j}(\Omega_{ij}) \sum_{i<j} R_i R_j \tag{139}$$

$$\leq \max_{i \neq j}(\Omega_{ij}) \cdot 15 \cdot \max(R_i)^2 \tag{140}$$

Therefore:

$$\eta_{\text{global}} = \frac{E_{\text{coupling}}}{15 \cdot \max(R_i)^2 \cdot \max_{i \neq j}(\Omega_{ij})} \leq 1 \tag{141}$$

Lower bound: $E_{\text{coupling}} \geq 0$ since $\Omega_{ij} \geq 0$ and $R_i \geq 0$.
